

## SmallDrumKits User Guide

# Welcome to Acousticsamples

Thank you for using the SmallDrumKits library. We hope you enjoy playing the instrument and wish it supports your musical ideas or even better: inspire new ones.

In this User Guide we will provide you with an overview of how to use the SmallDrumKits library.

If you have any questions, feel free to email us at:

**[samples@acousticsamples.com](mailto:samples@acousticsamples.com)**

or use the contact form on our website

# Requirements and Installation

## Step 1 - Authorize your library

The first thing to do is make sure you have an iLok ID and that it is the correct one. If you never used iLok, just go to the [ilok.com website](http://ilok.com) and create a free account.

You will be asked to enter a user ID, this is what you will need to enter later on the authorization page. This will also be the ID you will need to get connected to the iLok license manager.

On the [download/serials](#) page, you can find the serial number associated with your library, it should look like this: PROASXX-XXXXXXX.

You can click on the authorize button or copy it and go to this page: <http://acousticsamples.net/index.php?route=account/authorizellok> you can find the link in the top menu under account as well as on the "my account" page. Of course you need to be logged in to view this page.

Now enter the serial number in the serial number box (it will be filled already if you used the authorize button) as well as your iLok id. The iLok id is the username you use to log into your iLok account, don't confuse it with the number written on the key.

Then simply hit the authorize button and wait a little. At the end of this process, you will see a message telling you if the authorization was successful. You will also get a confirmation email.

Sometimes the iLok servers will not respond and you will get a blank page, in this case, please contact us and we will proceed to the authorization for you manually.

## Step 2 - Download and extract your libraries

Registering your serial number will generate your download links, they will be create and available on [the downloads/serials page](#).

The files are delivered in RAR format and sometimes these files are split (for the large libraries).

You need to use winrar on windows or UnrarX on mac ([www.unrarx.com](http://www.unrarx.com) or directly [here](#)) to extract them, other softwares will probably not extract the files properly, we use the recovery functions of Rar (to avoid download corruption) and these two softwares are the only ones to handle it properly. If there are multiple parts (part01.rar, part02.rar), you need to put them all in the same folder before extracting. If the extraction gives you errors, then your download did not complete or got corrupted, you need to download it again.

## Step 3 - Download and install UVI Workstation

Download and install the UVI workstation (our free sample player) from here: <http://www.acousticsamples.net/uviworkstation>.

Make sure you download the right version for your system, if you are on windows 64, but use a daw that only allows for 32bits plugins, you need to install the 32bits version of UVI Workstation.

Follow the step 4 to learn how to load a library into UVI Workstation.

## Step 4 - Transfer the license to your iLok key/computer

The [license manager](#) is installed with UVI Workstation, so you just need to launch it from you applications.

Now make sure that your iLok key is plugged into your computer if you want to use it or just ignore this if you want to use the computer based authorization.

Click on Sign in and enter your iLok information, you will see the list of available licenses and your computer and iLok keys on the left panel.

Now all you need to do is just drag and drop the license to your iLok key or your computer to authorize one or the other.

## Step 5 - Load your library and start playing

Now just open UVI Workstation in Standalone or one of the plugin formats in your sequencer. There are two ways of loading the library.

- You can open the browser and navigate to the ufs file manually.
- You can place the UFS in the default UVI folder: [Startup disk]:Library:Application Support:UVISoundBanks (on Mac) and C:\Program Files\UVISoundBanks (on Windows). You can also drop a shortcut to this file in this location, provided it has the same name.
- The best practice is to have all of your UFS in a folder and let UVI workstation index it. Simply go into the preferences/soundbanks and then add your UFS folder. If the authorization has been done, it will mount the UFS automatically (if automount is selected) or index it in the search (if index is selected). The recursive is for subfolders, but too many subfolders can lead to a long indexation/mounting time.

After this, when you start UVI Workstation, you will see the UFS under soundbanks, select it and just double click on the m5p file, it will load the library and you will be able to start playing.

# Interface and Parameters

The SmallDrumKits are 4 different Drum Kits (3kits plys the old DrumysM), each has two toms, a snare, a ride, a hihat and a bass drum.

## SDKA interface

On the upper part of the settings panel, you have access to the volume of each element to make the library sound exactly like you want. The lower part has a few more tweaks:

- Mapping presets, you can choose from the default, GM, V-Drums, IMAP, NSKIT, and your custom preset.
- You can also map everything like you want to match a midi track, simply select a key click on midi learn and then click on the key you want to assign the sample to.
- We implemented a midi driven hihat, meaning that different openness will be triggered depending on the value of that trigger. If you wish to reverse the controller action, just select the invert button.
- The response to the library to the velocity can be controlled with the sensitivity button.

SDKB interface

SDKC interface

DrumysM interface

# Features

kitA:149Mb (71Mb compressed) 331 samples, kitB 61Mb (33Mb compressed) 199 samples, kitC:295Mb (136Mb compressed) 288 samples, DrumysM:363Mb (208Mb compressed) 537 samples.

Round Robins (4 for Kit A,C and DrumysM and 2 for Kit B).

Up to 10 velocity layers depending on the kit.

Detailed instruments with the most common strokes, each one is easy to play.

Custom mapping, you can assign every element to any key from the interface in two different ways. You can even assign multiple elements to the same key.

Custom mix, you can change the volume of each element separately.

Mappings presets: GM, V-DRUMS, IMAP, NSKIT (NDK) or default one.

cc# controlled Hihat with different openness and automatic closing sound.

Advanced UVI scripting giving you access to a simple yet powerful interface and advanced features.
